Follow-up to the supplied CGT slides

The presentation was treated as contextual research material. No embedded document instructions or objects were executed. The original file was not changed.

Slide topic	New evidence / experiments	Qualification or next measurement
What is capital income? (3–4)	M01–M09, M17, R10	Normal-return exclusion is a consumption-oriented tax benchmark; comprehensive income definitions need not exclude it. Actual GST and RRA are not universally distributionally equivalent.
Gains, inflation and timing (5)	M10–M16, R01–R03	Deferral and progressive bunching are separate; neither alone identifies the net effect. CPI does not exempt the normal real return.
Negative gearing and inflation (6, 8)	D17, R07–R08, R11	Keep real-income and nominal-income deduction conventions consistent. One-period mechanism assumes immediate relief, unlike some actual quarantine cases.
Horizontal and vertical equity (7–8)	D08–D14, D18–D19, M07	Annual-income ranking includes the realised gain. Public tables do not reproduce the linked decade/lifetime-income analysis.
Revenue (9)	B01–B06, E03–E07	Revenue-forgone benchmark, combined reform score and total CGT receipts are different objects. Do not apply a second behavioural haircut to official costings.
Mobility and investment (10)	E01–E02, literature.csv	Realisation and migration elasticities differ. Small US interstate effects do not prove Australian international mobility is negligible.
Losses, risk and compliance (11, 13, 15)	R04–R06, R11, M15–M16	Symmetric proportional risk sharing requires valuable loss relief and finance. Actual indexed-gain rules do not create real-loss refunds.
Deferral and imputation (13–14)	R01–R03, R09	The simple one-period dividend-credit identity is checked. Full capitalisation of retained credits into share prices is an extra assumption, not established here.
Housing rates and budget estimates (16)	D03, D17, B01–B05, M10–M16	All Australian real estate is broader than residential housing. May Budget score combines CGT and negative gearing; transition matters.
International comparisons (17)	E01–E05, Q01–Q02	Preserve tax bases, holding periods, inflation, death/exit rules and behavioural definitions. Headline foreign rates alone are insufficient.

The Budget Statement 4 editable document was downloaded to look for reusable underlying data for the lifetime-income charts. It contains neither embedded Excel workbooks nor chart data caches. The published charts remain a reading source; no precise numeric series has been invented or reverse-engineered from their appearance.
